Syngenta receives approval for breakthrough fungicide ADEPIDYN™ in Argentina

- First registration of a product based on ADEPIDYN™
- Global peak sales potential estimated at more than \$750 million
- ADEPIDYN™ based products to be marketed under the MIRAVIS™ brand

Syngenta announced today that MIRAVIS™ Duo, a combination of ADEPIDYN™ and difenoconazole, has been approved by SENASA (regulatory authority in Argentina), for use on soybean for late cycle diseases. This is the first registration for a product based on ADEPIDYN™, a new fungicide belonging to the carboxamide chemical class.

ADEPIDYN™ provides a step change in leaf spot disease management and delivers excellent control of powdery mildew. It is highly effective on difficult-to-control diseases such as Fusarium head blight and moulds which cause severe damage to the crop. Syngenta is currently developing several ADEPIDYN™ based products to address various disease management challenges in soybean, wheat, corn, canola, vegetables and specialty crops around the world.

Jon Parr, President Global Crop Protection, Syngenta, said “MIRAVIS™ Duo builds on our strong fungicide heritage including ELATUS™ and AMISTAR® Technology. By continuing to deliver industry-leading innovation to growers, we are strengthening our global leadership in fungicides.”

First sales of MIRAVIS™ Duo are expected in the 2016/2017 soybean season in Argentina. Regulatory approvals are pending in several other markets.

About Syngenta

Syngenta is a leading agriculture company helping to improve global food security by enabling millions of farmers to make better use of available resources. Through world class science and innovative crop solutions, our 28,000 people in over 90 countries are working to transform how crops are grown. We are committed to rescuing land from degradation, enhancing biodiversity and revitalizing rural communities. To learn more visit www.syngenta.com and www.goodgrowthplan.com.
